

Austin Air Purifiers

Simply the Best Home Air Purifiers Available Today

Superior Advantages

- An excellent choice for homes and offices
- Removes a wide variety of contaminants, including dust, pollens, dander, odors, chemical vapors and more
- Offers the best HEPA filter available
- Attractive, state of the art design; ultra-quiet in operation

Why are Austin Air Purifiers The Best?

- **The State of the Art HEPA Filters**
True Medical HEPA and granulated carbon remove both gases and odors. These filters are made to last up to a full five years!
- **Their Warranty is the best in the business**
 - *5-Year Mechanical Warranty
 - *5-Year Pro-Rated Filter Warranty
 - *30 Day No-Questions Asked Guarantee
- **Removes toxic gases and airborne chemicals**
- **Quality construction and special engineering**
- Austin Air Purifiers were chosen by the Department of Homeland Security and FEMA to aid victims of the Sept. 11th WTC Attacks

The Link of Air Pollutants to Body Concerns

Clean air is essential to good health and especially your immune system. Unfortunately, foreign particles in the air can give rise to a variety of serious health risks.

Recent scientific evidence links **air pollution** to a wide range of health concerns such as **itchy eyes and nose, headaches, raspy throat, fatigue, wheezing, allergies, chemical sensitivities, fatigue, asthma, bronchitis, other respiratory illnesses, impairment of the immune system and a shortened life expectancy.**

How Clean is the Air You Breathe? Recent research has found that the **quality of air in our homes and offices is often 3 to 5 times worse than the outdoor air.** If you stop to consider the amount of time you spend indoors, you realize how big a threat poor air quality is to your health.

Every day, you typically inhale the equivalent of **two heaping tablespoons of airborne particles** that our bodies must process and eliminate. The smallest of these particles can be inhaled and end up deep inside the lungs in areas where the body's natural mechanisms cannot easily remove them. In addition, these contaminants can pass into the blood stream where they are disbursed throughout the entire body and can elicit negative reactions.

Inhaling toxic particles can also disrupt the body's ability to regulate the pumping of blood. As particulate counts rise on any given day, a critical indicator called 'heart rate variability' can decrease and upset the heart's beat-to-beat variations. Each year in the US, **approximately 64,000 people die prematurely from heart and lung disease due to particulate air pollution.**

Breathing Toxic Gases. Don't be fooled by where you are living. Whether you live in an area with clear blue skies or in a populated city, you can be assured the air inside your living space is polluted due to the gradual but relentless outgassing of chemicals from many things, such as furniture, drapes, carpets, fixtures, paint, etc. Thousands of chemicals and chemical compounds can contaminate the air we breathe. Examples of these toxic gasses are formaldehyde, ozone, carbon monoxide, benzene and radon.

If you are sleeping or working in a polluted environment, your immune system never gets a chance to rest. This causes a decrease in the efficiency or performance of your immune

system. This in turn can worsen your health and decrease your life.

No matter what your relative state of well being, **breathing clean air is one of the single greatest things you can do to sustain and improve your health.** Clean air is essential for good health and an optimal immune system.

Breathing clean air and your immune system are inextricably linked. Breathing clean air allows your immune system time to rest, repair and rejuvenate. Just as you need sleep, your immune system also needs rest (without battling toxins) in order to function properly.

Medical-Grade HEPA Filters. Austin Air Purifiers have been designed with medical-grade **HEPA filtration** to help resolve our problem of indoor air pollution. You may choose either the **Health Mate** (for a full house) or the **Health Mate Junior** (for a room). Austin Air Cleaners come with a 5- year mechanical warranty and a 5-year pro-rated filter warranty. Simply the best air purifiers sold today.

In the aftermath of the September 11th attacks, Austin Air was there. In the months following the collapse of the World Trade Center, some Manhattan residents with asthma, reported that their asthma worsened. When the WTC fell, they released tons of airborne contaminants containing asbestos and other harmful particulate. Austin Air purifiers with high-efficiency "HEPA" filters were distributed to remove the dust and harmful asbestos. These purifiers can remove up to 99.97% of harmful particles, including dust mites, mold spores, pet dander, allergens and more.

Listen to What People Are Saying About Austin Air Purifiers

"I found the Austin HealthMate™ to be far superior to all other portable purifiers in my treatment of patients with multiple chemical sensitivities." --Dr. W.G.L. Chester, Nova Scotia

"I can't begin to tell you how excited I am about my HealthMate™ air cleaner! I have had asthma for approximately 17 years. I have been huffing and puffing my way through life. We have tried every air cleaner under the sun to no avail. I was at the end of my rope with asthma, so my husband told me to order your HealthMate™ air cleaner! Now, one month later I am doing great! I can go shopping, clean and run the sweeper without stopping every few minutes to catch my breath. I thank you from the bottom of my heart for giving me my life back. --EH, Florida

"I have personally witnessed the extremely effective qualities of the Austin Air HealthMate™. It has proven itself as an effective method to reduce problems associated with chemical sensitivities."

-- Dr. J.D., Ann Arbor, MI

"The HealthMate™ is very useful in combating allergy related problems. I have one at home for my own mold spore sensitivity" --Dr. L.G., Bronx, NY

Why don't you recommend an air purifier that also produces ozone? Recent research shows that ozone generated from metallic plate sources typically produces toxic byproducts which are harmful to breathe.
